Report Overview

A Small-Lift Launch Vehicle (SLV) is a type of space launch vehicle specifically designed to carry small payloads, typically weighing between 100 kg to 1,000 kg, into low Earth orbit (LEO). These vehicles are characterized by their relatively smaller size and lower cost compared to traditional heavy-lift launch vehicles. The primary purpose of an SLV is to provide a cost-effective and efficient means of launching small satellites, CubeSats, and other lightweight payloads into space for various applications, including Earth observation, scientific research, and communication. The development and deployment of SLVs aim to address the growing demand for space access, particularly from small satellite operators, by offering a more affordable and flexible alternative to traditional launch services.
