Report Overview

A Small Outline DIMM (SO-DIMM) is a type of memory module used in computers and other electronic devices, specifically designed for compact spaces. It is a smaller version of the standard DIMM (Dual In-line Memory Module) and is commonly found in laptops, small-form-factor PCs, and other devices with limited space for memory expansion. SO-DIMMs are available in various memory capacities and speeds, depending on the specific requirements of the device they are intended for. They are characterized by their reduced physical dimensions compared to standard DIMMs, allowing for a more efficient use of space within the device. SO-DIMMs typically have a 200-pin or 204-pin connector, and they are designed to be easily removable and replaceable, facilitating upgrades or repairs. The use of SO-DIMMs enables the production of thinner and lighter devices while still providing the necessary memory for efficient operation.
