Report Overview

Smoke ventilators are specialized architectural components designed to enhance the safety and efficiency of buildings, particularly in emergency situations such as fires. These devices are strategically installed in the roofs or walls of buildings to facilitate the controlled release of smoke and heat during a fire, thereby reducing the risk of smoke inhalation and improving visibility for occupants to evacuate safely. Smoke ventilators are engineered to operate automatically in response to heat and smoke detection, and they are crucial in maintaining a clear path for smoke to exit the building, which helps to prevent the spread of fire and smoke throughout the structure.
