Report Overview

Sodium Ferric EDDHA, also known as sodium iron ethylenediaminetetraacetate, is a chemical compound that serves as a chelating agent. It is specifically designed to bind and stabilize iron ions, enhancing their solubility and bioavailability in various applications. This compound is widely used in agriculture as a micronutrient fertilizer to improve iron uptake by plants, particularly in soils with high pH levels where iron is less available. Additionally, Sodium Ferric EDDHA is employed in pharmaceuticals and medical applications for its ability to deliver iron to the body in a form that is easily absorbed. The compound is characterized by its high stability, which prevents the iron from precipitating or being lost in the environment, making it an effective and environmentally friendly solution for iron deficiency in both plant and human health contexts.
