Report Overview

A soft flexible gripper is a robotic end-effector designed with compliant and deformable materials, enabling it to adapt to various shapes and sizes of objects during grasping and manipulation tasks. Unlike rigid grippers, these devices leverage flexibility to conform to the contours of objects, providing a more versatile and gentle approach to handling items. This technology is particularly useful in applications where a delicate touch is required, such as handling fragile or irregularly shaped objects in industries like manufacturing, logistics, and healthcare. The soft flexible gripper enhances dexterity and adaptability in robotic systems, contributing to improved efficiency and precision in object manipulation tasks.
