### Report Overview

Soft-wrapped aluminum plastic films are composite materials consisting of multiple layers, typically including an aluminum foil layer bonded with plastic films such as polyester (PET) or polypropylene (PP), designed to provide excellent barrier properties against moisture, oxygen, and light. These films are widely used in industries such as pharmaceuticals for blister packaging, food packaging for extended shelf life, and lithium-ion battery manufacturing due to their lightweight, flexibility, and durability. The aluminum layer ensures high barrier performance, while the plastic layers enhance mechanical strength, heat-sealability, and printability, making them suitable for demanding applications where protection and preservation are critical. The product's versatility and effectiveness in preventing contamination and degradation have made it indispensable in sectors requiring stringent packaging standards.
