Abstracts

The original intention of the design of the lithium battery protection board is to ensure the safety of lithium batteries and ensure that lithium-ion batteries will not be overcharged or over-discharged. Since overcharging and over-discharging of lithium-ion batteries in the past can cause battery damage or explosions, fires and other dangers, protection boards also appeared when lithium-ion batteries were introduced. Recently, with the emergence of lithium iron phosphate lithium-ion batteries, it is said that lithium iron phosphate lithium-ion batteries are not afraid of overcharging and over-discharging, so there is a saying that they can be used without protection boards. However, so far, no battery manufacturer has publicly announced that it will not use protection circuits. The purpose of the protection board is the bodyguard, and the protection board is to ensure the safety of lithium-ion batteries.

The global Software Lithium Battery Protection Board market size was estimated at USD 1500.25 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.45% during the forecast period.
