Abstracts

Soil Vapor Extraction (SVE) is a common soil and groundwater contamination remediation technology used to treat volatile organic compounds and other contaminants in soil. The system works by creating a vacuum in contaminated soil, causing volatile organic compounds in the soil to evaporate into a gaseous state, and extracting these pollutant vapors through an extraction well or network of extraction wells. These extracted vapors are typically sent to treatment systems to convert pollutants into forms that are not environmentally hazardous.

The global Soil Vapor Extraction Svc Systems market size was estimated at USD 385.42 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.85% during the forecast period.
