Report Overview

Soilless Hydroponic Vegetables refer to a type of agricultural produce that is grown without the use of soil, instead relying on a nutrient-rich solution to provide essential minerals and water for plant growth. This method of cultivation is known as hydroponics, which is a subset of soilless culture. The nutrient solution is typically composed of water and carefully balanced concentrations of various salts and minerals that plants require for growth. The vegetables grown using this technique are often perceived to be more sustainable, as they can be cultivated with less water and land compared to traditional soil farming, and they may also have a reduced risk of soil-borne diseases. Additionally, soilless hydroponic vegetables can be grown in controlled environments, allowing for year-round production and potentially higher yields.
