Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Solid Rocket Engine competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The global production of solid rocket engines is approximately 605,181 units, with a unit price of approximately US\$14,000 per unit. A solid rocket engine is a type of rocket engine that uses solid propellants—typically a mixture of fuel and oxidizer—packed into a rigid casing. Once ignited, the propellant burns to produce high-pressure gas, which is expelled through a nozzle to generate thrust. Solid rocket motors are known for their simplicity, reliability, and rapid response time, making them ideal for applications such as missiles, launch vehicle boosters, and space propulsion systems.

The global Solid Rocket Engine market size was estimated at USD 8715.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.60% during the forecast period.
