Abstracts

Solvent-based mandrel release agent is a coating agent usually composed of active ingredients and solvent. They are widely used in the manufacturing process, especially when manufacturing products with complex shapes, to avoid adhesion problems between the product and the mold or mandrel. After these release agents are coated on the surface of the mold or mandrel, the solvent will evaporate quickly, leaving the active ingredients to form a lubricating film to reduce friction and adhesion between the product and the mold.

The global Solvent Based Mandrel Release Agents market size was estimated at USD 215.5 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.45% during the forecast period.
