Report Overview

A Solvent-based Mold Release Agent is a specialized chemical compound designed to facilitate the separation of a molded product from its mold or die during the manufacturing process. This product is formulated with solvents that lower the surface tension between the mold and the material being molded, such as plastics, rubber, or composites. The primary function of a solvent-based mold release agent is to prevent adhesion, ensuring that the molded item can be easily removed from the mold without damaging the product or the mold itself. It is typically applied as a thin, even coating on the mold surface, which then dries to form a film that acts as a barrier. The choice of solvent in the release agent is crucial as it should be compatible with the material being molded and should not affect the mold's surface properties or the final product's quality. Solvent-based release agents are known for their effectiveness in high-temperature molding processes and their ability to provide a consistent release with minimal residue, which is beneficial for maintaining the integrity and finish of the molded parts.

In 2024, the global Solvent-based Mold Release Agent market is projected to reach approximately USD xx Million, with expectations to grow at a compound annual growth rate (CAGR) of around xx between 2024 and 2033.
