Report Overview

A Sound Activated Switch is an electronic device designed to control the operation of electrical appliances or circuits based on the detection of sound or noise. These switches typically include a microphone or sound sensor that detects changes in sound levels and triggers the switching mechanism accordingly. When the sound level exceeds a predefined threshold or reaches a specific frequency range, the switch activates or deactivates the connected electrical circuit, allowing for hands-free operation of devices such as lights, fans, alarms, or audio systems. Sound activated switches are commonly used in various applications where manual operation is impractical or inconvenient, such as home automation, security systems, entertainment setups, and industrial machinery.
