Report Overview

Special zinc powder for anti-corrosion coating is a high-purity, finely ground metallic zinc powder used primarily as a key component in zinc-rich primers and coatings, which provide cathodic protection to steel and other metal substrates by acting as a sacrificial anode. This type of zinc powder is characterized by its particle size distribution, surface area, and chemical purity, ensuring optimal adhesion, conductivity, and corrosion resistance in demanding industrial environments such as marine, automotive, and infrastructure applications. The powder is often alloyed or treated to enhance performance, including improved dispersion in coatings, reduced reactivity with binders, and long-term durability under harsh conditions. Its effectiveness in preventing rust and extending the lifespan of coated structures makes it indispensable in protective coating systems, particularly in industries where corrosion poses significant operational and safety risks. The product is regulated by industry standards such as ISO 3549 and ASTM D520, ensuring consistent quality and performance in commercial and industrial applications.
