### Report Overview

A spherical milling cutter is a tool mounted on a milling machine, and its blade shape is similar to a sphere. It is mainly used for milling various curved surfaces and arc grooves. Spherical milling cutters are widely used in machinery manufacturing, mold manufacturing, CNC machining, aerospace and automotive industries, and are particularly suitable for machining complex workpieces such as curved surfaces, spherical surfaces, part edges and convex and concave surfaces. The material of the spherical milling cutter is usually ultra-fine tungsten steel, etc. Some products also use coating technology, such as TiAlN titanium aluminum nitride coating, to improve its hardness and wear resistance. The ball milling cutter has multiple small cutting edges, which can reduce the impact force between the tool and the workpiece during the machining process, thereby improving cutting efficiency and precision. In addition, the ball milling cutter can also achieve high-precision and high-efficiency machining effects, meeting the high requirements for workpiece surface quality.
