### Report Overview

A Sphericity Interferometer is an optical instrument used to measure the sphericity or roundness of a surface with high precision. It utilizes the principle of interferometry, where two light beams superpose and create an interference pattern. By analyzing the interference fringes produced by the interaction of the test surface and a reference surface, the sphericity of the test surface can be determined. Sphericity Interferometer is commonly used in industries like optics, precision engineering, and semiconductor manufacturing to ensure the accuracy and quality of components such as lenses, mirrors, and spherical objects.
