Report Overview

Spiral Shielded Cable is a type of electrical cable that is specifically designed to provide enhanced electromagnetic interference (EMI) and radio frequency interference (RFI) protection. This cable features a spiral pattern of shielding material, typically made from a conductive material such as copper or aluminum, which is wrapped around the cable's core. The spiral design allows for a more consistent and effective shielding coverage, as it can be more easily adjusted to fit various cable diameters and maintain a uniform distance from the core. The primary purpose of this shielding is to prevent external interference from affecting the signal transmission within the cable, ensuring reliable and high-quality data or power transfer. Spiral Shielded Cable is commonly used in applications where signal integrity is critical, such as in audio and video equipment, industrial control systems, and telecommunications.
