Abstracts

A spiral-wing UAVs is an unmanned robotic system that uses propellers to provide lift and control flight. Its flight principle is similar to that of a helicopter, providing lift through the thrust generated by the propeller, and controlling the flight direction and attitude by adjusting the rotation speed and tilt angle of the propeller. It has the advantages of high flexibility, good flight stability, and low requirements for take-off and landing space. It is widely used in aerial photography, agricultural plant protection, emergency rescue, monitoring and surveying and other fields. Their design and functions can be customized and optimized according to specific application requirements. Some spiral-wing UAVs also have intelligent functions such as autonomous flight, automatic obstacle avoidance, and payload delivery.

The global Spiral Wing Unmanned Aerial Vehicle market size was estimated at USD 285.42 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.75% during the forecast period.
