Report Overview

Split Core Current Transformers (SCTs) are a type of electrical instrument used in various industries for measuring and monitoring current in electrical circuits. These transformers are designed with a split or hinged core, which allows them to be easily installed around a conductor without the need for disconnecting the power supply. The SCTs operate on the principle of electromagnetic induction, converting the primary current into a proportional secondary current. They are known for their versatility, as they can be used in both AC and DC circuits, and are available in a wide range of current ratios to suit different measurement requirements. The split core design also facilitates easy maintenance and reduces downtime, making them a popular choice for applications where non-intrusive installation and flexibility are crucial.
