Report Overview

The Split DC Charging System is an advanced electric vehicle (EV) charging solution designed to optimize power distribution by separating the AC-to-DC conversion unit from the charging terminals. This system consists of a centralized power cabinet that converts grid AC power to DC and multiple charging dispensers connected to it, allowing for scalable and efficient charging in high-demand settings such as fleet depots, public charging stations, and commercial hubs. Unlike traditional integrated chargers, this modular approach reduces installation costs, minimizes space requirements, and enhances energy management by dynamically allocating power based on demand. Its ability to support high-power charging (up to 350 kW or more) makes it ideal for fast-charging applications, catering to both current and next-generation EVs with ultra-fast charging capabilities. The system's flexibility, reliability, and efficiency position it as a critical infrastructure component in the rapidly expanding EV ecosystem.
