Report Overview

Sponge Iron Powder (SIP) is a form of iron that has been processed to remove impurities and is in a porous, sponge-like state. It is produced through the direct reduction of iron ore, typically using natural gas or coal as a reducing agent, in a process that bypasses the traditional blast furnace route. SIP is characterized by its high purity, low phosphorus content, and spherical shape, which makes it suitable for use in various applications such as steelmaking, foundry industry, and as a raw material in the production of steel alloys. Due to its high reactivity and reduced energy consumption in the steelmaking process, SIP is considered an environmentally friendly and efficient alternative to traditional iron sources.
