Report Overview

Sponge Microneedle is an innovative skincare product that utilizes microneedle technology to enhance the absorption and effectiveness of topical treatments. This product is composed of a sponge-like base material that is embedded with tiny, hair-thin needles made from biodegradable polymers. These microneedles are designed to create micro-injuries in the outermost layer of the skin, known as the stratum corneum, without causing pain or bleeding. This process allows for the increased penetration of active ingredients from skincare products, such as serums or creams, into the deeper layers of the skin, where they can be more effectively utilized. The sponge microneedle is typically used as a pre-treatment or in conjunction with other skincare treatments to improve their efficacy and promote better skin health.
