Report Overview

Spontaneous Combustion Inhibitors (SCIs) are specialized chemical compounds or materials designed to prevent or mitigate the risk of spontaneous combustion in various industrial processes and materials. These inhibitors work by disrupting the chemical reactions that lead to self-ignition, thereby reducing the likelihood of fires or explosions. They are commonly used in industries such as coal mining, oil and gas extraction, and waste management, where materials prone to spontaneous combustion are handled. SCIs can be applied in various forms, including as a coating, additive, or incorporated into the material itself. Their primary function is to slow down or stop the exothermic oxidation process, which can lead to a temperature increase and eventual ignition of the material. By doing so, SCIs help ensure the safety of workers and the integrity of equipment, as well as reduce the environmental impact and financial costs associated with fires and explosions.
