Report Overview

A Spring Return Ball Valve is a type of quarter-turn valve that utilizes a ball with a hole or port through it as the flow-controlling element. It is designed to regulate, control, or stop the flow of various fluids, including gases, liquids, and slurries, by rotating the ball within the valve body. The unique feature of this valve is its spring return mechanism, which automatically returns the ball to its closed position when the manual or automated control is released. This ensures a fail-safe operation, particularly in situations where the valve must close in the event of a power failure or system malfunction. Spring Return Ball Valves are commonly used in applications requiring precise flow control and safety, such as in industrial processes, water treatment facilities, and gas distribution systems. They are known for their durability, low maintenance, and ability to provide a tight seal, making them a reliable choice for various fluid control needs.
