## Abstracts

The square aluminum shell battery module is a form of battery packaging that is widely used in electric vehicles, energy storage systems and other fields that require high energy density and high safety. This module uses aluminum alloy material as the shell, which provides excellent mechanical strength and thermal conductivity, ensuring that the internal battery cells are effectively protected under various operating conditions. The aluminum shell structure not only helps to dissipate heat, but also prevents electrolyte leakage through laser welding or other sealing technologies, thereby improving the safety and reliability of the battery. Due to its square or rectangular design, this battery module can be easily stacked and installed to meet the space requirements of different equipment.

The global Square Aluminum Shell Battery Module market size was estimated at USD 1850.25 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.45% during the forecast period.
