## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Stainless Steel Cable Glands competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Stainless Steel Cable Glands production reached approximately 30500 k units with an average global market price of around US\$ 30 per unit. Stainless Steel Cable Gland is a mechanical device designed to securely terminate and seal the end of an electrical cable in industrial installations. It provides strain relief, environmental protection, and reliable electrical continuity between the cable and equipment. Manufactured from stainless steel, these glands offer high mechanical strength, corrosion resistance, and durability, making them suitable for harsh or hazardous environments. They are commonly used with armored and unarmored cables, ensuring ingress protection against dust, moisture, and chemicals, while also maintaining compliance with safety and performance standards. The global stainless steel cable glands market is witnessing steady growth, driven by the increasing demand for safe, durable, and corrosion-resistant cable management solutions in harsh and hazardous environments. Unlike plastic or brass variants, stainless steel cable glands offer superior mechanical strength, resistance to chemicals, UV radiation, extreme temperatures, and seawater corrosion, making them highly suitable for heavy-duty and mission-critical applications. Key industries such as oil & gas, petrochemicals, marine, renewable energy, pharmaceuticals, food processing, power generation, and heavy machinery are the major end users. In these sectors, cable glands are essential for ensuring ingress protection (commonly IP66, IP68, and sometimes IP69K), maintaining electrical continuity, and meeting international safety standards such as ATEX, IECEx, UL, and CE for use in explosive or hazardous locations.

The global Stainless Steel Cable Glands market size was estimated at USD 905.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.10% during the forecast period.
