### Report Overview

Personal Flotation Devices (PFDs), also known as life jackets, are essential safety equipment designed to keep individuals afloat in water, ensuring their safety during water-based activities. Standard PFDs are rigid or semi-rigid devices that provide buoyancy and support to the wearer, typically made from materials like foam or closed-cell neoprene. They are designed to conform to specific safety standards and are suitable for various water activities, including boating, fishing, and water sports. Inflatable PFDs, on the other hand, are more compact and lightweight, featuring an inflatable bladder that can be quickly inflated in case of emergency. These devices are often equipped with an oral inflation tube and a CO2 cartridge for rapid inflation, making them convenient for activities where space and weight are concerns. Both standard and inflatable PFDs are crucial for ensuring the safety of individuals in water, with the choice between them depending on the specific needs and preferences of the user.
