Abstracts

Standby Uninterruptible Power Supply is a type of power protection system that provides backup power to connected devices in the event of a power outage or other power-related issues. Standby UPS typically operates in a 'standby' mode, where it remains idle and the connected devices are powered by the main utility power. When a power outage occurs, the Standby UPS quickly switches to battery power to provide uninterrupted power to the connected devices. The switch to battery power usually takes only a few milliseconds, and during this time, the connected devices remain powered on without any interruption.

The global Standby Uninterruptible Power Supply market size was estimated at USD 4500.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
