Abstracts

Starch-based biodegradable materials are a type of bioplastic made from starch, a natural polymer found in plants like corn, potatoes, and wheat. These plastics are designed to decompose more easily than traditional petroleum-based plastics, making them an eco-friendly alternative. Starch-based biodegradable plastics offer a more sustainable option compared to traditional plastics, particularly in reducing the long-term environmental impact of plastic waste. However, their biodegradability is highly dependent on environmental conditions, and they are most effective when disposed of in proper composting facilities.

The global Starch Based Biodegradable Materials market size was estimated at USD 1250.42 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.75% during the forecast period.
