Abstracts

A stationary high-pressure cleaner is a cleaning device that uses high-pressure water to remove dirt, grime, and other contaminants from surfaces. Unlike portable pressure washers, which are designed for mobility, stationary high-pressure cleaners are permanently installed in a fixed location, such as a garage or workshop. These cleaners typically consist of a motor or engine that powers a pump, which pressurizes the water. The high-pressure water is then delivered through a hose and nozzle, allowing the user to direct the water jet onto the surface to be cleaned. Stationary high-pressure cleaners are commonly used in industrial settings, such as manufacturing plants, warehouses, and car wash facilities, where a high volume of cleaning is required. They are also used in commercial settings, such as hotels, restaurants, and shopping centers, where regular and efficient cleaning is necessary. These cleaners are often more powerful and have a higher flow rate compared to portable pressure washers, allowing them to tackle larger and more demanding cleaning tasks. They are also designed for continuous use, making them suitable for heavy-duty cleaning applications.

The global Stationary High-pressure Cleaner market size was estimated at USD 1228.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.
