Report Overview

Steady State and Time Resolved Spectrofluorometers are advanced analytical instruments used for studying the properties of fluorescent molecules. These devices measure the intensity and spectral characteristics of emitted light from a sample after excitation by a light source. Steady State Spectrofluorometers focus on the equilibrium state of fluorescence, providing information about the relative fluorescence intensity and emission spectra of a sample. Time Resolved Spectrofluorometers, on the other hand, measure the decay of fluorescence over time, offering insights into the dynamics and kinetics of molecular interactions. Both types of spectrofluorometers are crucial in fields such as biochemistry, materials science, and pharmaceutical research, enabling researchers to analyze the behavior of fluorescent probes, monitor chemical reactions, and study the interactions between molecules.
