Report Overview

Steel lined plastic storage tanks are composite containers designed for storing liquids, combining the corrosion resistance of plastic with the structural strength of steel. These tanks typically feature an inner plastic liner (often made of polyethylene or polypropylene) to prevent chemical reactions with stored materials, while an outer steel shell provides durability and load-bearing capacity. They are widely used in industries such as chemical processing, water treatment, agriculture, and oil & gas, where resistance to corrosive substances, UV exposure, and mechanical stress is critical. The hybrid construction allows for cost-effective, long-term storage solutions, particularly in harsh environments where pure plastic or metal tanks would degrade or fail. Market demand is driven by industries requiring safe, leak-proof storage for aggressive chemicals, potable water, and industrial effluents, with growth further supported by stricter environmental regulations and the need for durable infrastructure in emerging economies.
