Report Overview

Sterile Cryogenic Tubes are specialized laboratory containers designed for the storage and preservation of biological samples, such as cells, tissues, and genetic materials, at extremely low temperatures. These tubes are typically made from materials like polypropylene or other plastics that can withstand the harsh conditions of cryogenic storage, which often involves temperatures below -150°C . The primary purpose of these tubes is to maintain the viability and integrity of the samples over extended periods, facilitating long-term research, genetic banking, and medical applications. Sterile Cryogenic Tubes are designed to be leak-proof and resistant to breakage, ensuring the safety and security of the samples contained within. They are often pre-sterilized to eliminate the risk of contamination and are compatible with various cryogenic storage systems, including liquid nitrogen tanks and automated storage devices.
