Report Overview

Sterile Lap Sponges are medical instruments designed to assist surgeons during surgical procedures. These sponges are made from non-woven materials, such as polyester or cotton, and are specifically designed to be absorbent and soft, ensuring minimal irritation to the patient's tissues. The primary function of Sterile Lap Sponges is to absorb fluids, such as blood and other bodily fluids, during surgery to maintain a clear and sterile field. They are also used to protect organs and tissues from direct contact with surgical instruments, reducing the risk of infection and injury. Sterile Lap Sponges are pre-sterilized, usually through gamma irradiation or ethylene oxide, to ensure they are free from contaminants before use. They come in various sizes and shapes to cater to different surgical needs, and are typically disposed of after a single use to maintain sterility and prevent cross-contamination.
