Report Overview

Strong Basic Anion Exchange Resin (SBA) is a type of ion exchange resin specifically designed for the removal of anionic contaminants from water or other liquid solutions. It is characterized by its high selectivity and capacity for anions, such as chloride, sulfate, and nitrate ions. SBA resin typically consists of a polystyrene matrix with quaternary ammonium functional groups, which provide a strong positive charge that attracts and binds negatively charged ions. This resin is commonly used in various applications, including water softening, demineralization, and purification processes in industries such as pharmaceuticals, food and beverage, and chemical processing. The strong basic nature of the resin ensures effective ion exchange, even in challenging conditions, making it a reliable choice for high-performance anion removal.
