Abstracts

A subsea multiphase flow measurement system is a device used to measure the individual phase flows of the constituent phases in a given flow (such as the oil and gas industry) where the oil, water and gas mixture is initially mixed together during the oil production process. Because oil, gas, and water all contain hydrogen atoms, multiphase flows can be measured using magnetic resonance. For this, the fluid is magnetized and subsequently excited by radio frequency pulses. The hydrogen atoms respond to the pulse and send back recorded echoes.

The global Subsea Multiphase Flow Measurement System market size was estimated at USD 285.5 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
