Report Overview

Sucrose palmitate is a nonionic, emulsifying food additive derived from the esterification of sucrose (table sugar) and palmitic acid, a saturated fatty acid. It is commonly used in the food industry as an emulsifier, stabilizer, and surfactant, enhancing the texture, stability, and shelf life of various products. Sucrose palmitate is known for its ability to improve the foaming properties of whipped toppings, prevent crystallization in sugar confections, and provide a smooth texture in ice cream and other frozen desserts. It is also used in non-food applications, such as cosmetics and pharmaceuticals, due to its surfactant properties and ability to reduce surface tension. As a food additive, it is classified under the E number E473 and is considered safe for consumption within regulated limits by health authorities.
