Report Overview

A suction lysimeter is an instrument used to measure soil moisture mobility. It evaluates the soil's permeability and water conductivity by creating negative pressure (sucking) in the soil, allowing water to move from the soil into the instrument, and then measuring the flow, or rate at which the water comes out. This instrument is usually used for the study of soil moisture properties to help understand the dynamic changes of moisture in the soil and the moisture transport characteristics of the soil.
