Report Overview

Sulfamic acid (H_2NSO_2), also known as amidosulfonic acid, is a white crystalline solid with strong acidic properties, widely used as a descaling agent, cleaning agent, and precursor in chemical synthesis. It is valued for its non-corrosive nature to metals, water solubility, and effectiveness in removing rust, limescale, and mineral deposits, making it essential in industrial cleaning, water treatment, and metal processing. The market for sulfamic acid is driven by demand from industries such as paper & pulp, textiles, and food processing, where it is used for equipment maintenance and pH regulation. Growth is further supported by its applications in herbicides, dyes, and flame retardants. However, environmental concerns and regulatory restrictions on chemical usage may pose challenges. Asia-Pacific dominates production and consumption due to industrial expansion, while North America and Europe focus on high-purity applications in specialty chemicals. Competitive pricing, raw material availability (sulfur trioxide and urea), and innovations in eco-friendly formulations influence market dynamics.
