Report Overview

Sulfate-resistant steel is a specialized type of steel alloy designed to withstand corrosion in environments with high sulfate concentrations, such as seawater, soil, or industrial wastewater. It typically contains low carbon content and added elements like chromium, nickel, or molybdenum to enhance resistance to sulfate-induced stress corrosion cracking and pitting. This steel is widely used in marine infrastructure, chemical processing plants, pipelines, and coastal construction where long-term durability in aggressive environments is critical. The demand for sulfate-resistant steel is driven by increasing investments in offshore oil & gas, desalination plants, and coastal urbanization, particularly in regions with harsh environmental conditions. Its performance characteristics make it essential for applications requiring extended service life and reduced maintenance costs.
