Report Overview

Sulfonated Aliphatic Polyester (SAP) is a type of polymer that is derived from aliphatic polyesters, which are linear or branched polymers with ester linkages in their main chain. The sulfonation process introduces sulfonic acid groups (-SO₃H) onto the polymer chain, enhancing its hydrophilic properties. This modification makes SAP particularly useful in various applications, such as in the production of surfactants, detergents, and as a component in oilfield chemicals. The sulfonated groups confer water solubility and improve the compatibility of the polymer with aqueous systems. Additionally, SAP can be tailored for specific uses by adjusting the degree of sulfonation and the molecular weight of the base polyester. This versatility allows for the creation of customized products that can meet the demands of different industrial and environmental applications.
