Report Overview

Supragingival powder is a specialized dental cleaning product designed for professional use in removing plaque, stains, and biofilm from tooth surfaces above the gumline. It consists of fine abrasive particles, often derived from sodium bicarbonate, glycine, or calcium carbonate, combined with flavored or therapeutic additives for enhanced patient comfort. The powder is applied using a prophylaxis handpiece with compressed air and water, creating a gentle yet effective cleaning action that minimizes enamel damage compared to traditional polishing pastes. Its primary applications include cosmetic dentistry, preventive care, and stain removal, particularly for patients with heavy calculus buildup or extrinsic discoloration. The product is favored for its efficiency in reducing aerosol production during procedures—a critical factor in infection control—while offering superior polishing results compared to conventional methods. Its non-abrasive formulations cater to sensitive teeth and restorations, making it a versatile tool in modern dental practices.
