Report Overview

A surface mount humidity sensor is a sensor that pastes the surface of the humidity sensor component directly on the surface of a circuit board or other equipment. Such sensors typically use a capacitive-based measurement principle to output an electrical signal by measuring the humidity in the surrounding environment. Surface mount humidity sensors usually consist of a sheet-like base material and a film-like sensing layer coated with a moisture-absorbing polymer material. When moisture in the surrounding environment enters the sensing layer and is adsorbed on the polymer material, the capacitance value of the sensing layer will change, thereby changing the output electrical signal of the sensor. The output signal of the sensor can be connected to a microcontroller or other electronic equipment for signal processing. Surface mount humidity sensors are widely used in various electronic equipment and automation systems, such as indoor temperature and humidity control systems, refrigerators, air conditioners, dryers, industrial production equipment, etc. Due to its small size, light weight, easy installation and integration, more and more devices use surface mount humidity sensors for humidity monitoring and control.
