Report Overview

Surface Mount RTD, or Resistance Temperature Detector, is a type of temperature sensor that is designed to be mounted directly onto the surface of an object or within a device. This technology utilizes the principle of resistance change in a material with temperature variation. Typically, a surface mount RTD consists of a thin film or wire element made from a material like platinum, which is known for its stable and repeatable resistance-temperature characteristics. The sensor is often encapsulated in a protective material to ensure durability and resistance to environmental factors. It is widely used in various industries for precise temperature measurement and control, particularly in applications where a high level of accuracy and reliability is required, such as in industrial automation, medical equipment, and environmental monitoring systems.
