Abstracts

The surface profile measuring instrument is a testing instrument used to perform sub-nanometer measurements on the surfaces of various precision devices and materials. It is an optical testing instrument that uses white light interferometry technology, combined with precision Z-axis scanning modules, 3D modeling algorithms, etc. to perform non-contact scanning of the device surface and establish a 3D image of the surface. The system software processes and analyzes the device surface image and obtains 2D and 3D parameters that reflect the device surface quality, thereby achieving 3D measurement of the device surface morphology.

The global Surface Profile Measuring Instruments market size was estimated at USD 385.42 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.65% during the forecast period.
