Report Overview

Surgical clamps are essential medical instruments utilized in various surgical procedures to control bleeding, secure tissues, and provide hemostasis. They are designed to grip and hold blood vessels, tissues, or organs firmly, allowing surgeons to manipulate them with precision and control. These clamps come in a variety of shapes and sizes, each tailored to specific applications and anatomical structures. They can be broadly categorized into non-traumatic (e.g., mosquito, Allis, and Russian forceps) and traumatic (e.g., Kelly and Crile-Wood) clamps, with the former being designed to minimize tissue damage. Surgical clamps are made from materials like stainless steel or titanium to ensure durability and resistance to corrosion, and they are often sterilized and disposable to maintain aseptic conditions during surgery.
