## Abstracts

Surgical ligating clips are specialized devices used in surgical procedures to close or ligate blood vessels, ducts, or other tubular structures. These clips, typically made from biocompatible materials such as titanium or polymer, are applied using a surgical instrument to clamp and seal the target area, preventing blood flow or leakage. Medical surgical ligating clips are widely used in various surgeries, including those involving blood vessel control, organ resections, or the treatment of gastrointestinal conditions. They are essential tools in both open and minimally invasive surgeries, providing secure, effective closure with reduced risk of complications. The increasing adoption of minimally invasive surgeries (MIS) is a key driver for the Surgical Ligating Clips market. As surgeries shift toward less invasive procedures to reduce recovery times, minimize complications, and improve patient outcomes, devices like Surgical Ligating Clips are becoming essential. These cartridges offer efficient and secure methods for vessel and duct ligation, which are critical in many MIS procedures, including laparoscopic surgeries, cholecystectomies, and gastrointestinal surgeries. Furthermore, advancements in clip design, such as bio-absorbable materials and improved ergonomics, are enhancing the efficiency of surgical teams and contributing to the growing demand for Surgical Ligating Clips. The major challenges in the Surgical Ligating Clips market is the high cost associated with these specialized devices, which can limit their accessibility, especially in resource-constrained environments. Although Surgical Ligating Clips provide significant benefits in terms of safety and precision, the cost of disposable cartridges can add up over time, particularly in hospitals and clinics with high surgical volumes. Additionally, competition from alternative methods of vessel closure, such as sutures, staples, or electrocoagulation, can present a challenge to the widespread adoption of Surgical Ligating Clips. Manufacturers must address these cost-related concerns while continuing to innovate and demonstrate the clinical advantages of Surgical Ligating Clips in improving surgical outcomes. Global key players of Surgical

Ligating Clips include Teleflex Medical, Grena, Medtronic, Johnson & Johnson, etc. Global top five manufacturers hold a share over 78%. North America is the largest producer of Surgical Ligating Clips holds a share over 41%. In terms of product, polymer material is the largest segment, with a share over 99%. In addition, in terms of application, the largest application is minimally invasive surgery, with a share over 76%.
