### Report Overview

Surgical Non-absorbable Sutures are medical devices primarily used in suturing and stitching procedures during surgical operations. These sutures are made from non-absorbable materials, which means they do not break down or dissolve within the body over time. They are designed to provide long-lasting support and maintain the integrity of the tissue repair. Non-absorbable sutures are typically made from materials such as polyester, polypropylene, or silk, and are used in various surgical applications where permanent support is required, such as in the closure of wounds, hernia repairs, and orthopedic surgeries. These sutures are known for their strength, resistance to infection, and minimal tissue reactivity, making them a preferred choice in many surgical settings.
