Abstracts

Hanging Adhesiveless High Power Fiber Optic Bundles are a special type of fiber optic bundle with high power handling capability and thermal stability. Compared with traditional fiber optic bundles, it adopts a suspended structure, that is, there is an air or gas-filled gap between the fiber core and the outer cladding instead of the conventional solid cladding. The main features of the suspended glue-free high-power fiber optic bundle are as follows: High power handling capacity: Because the suspended structure can effectively reduce the heat loss and the nonlinear effect of the beam, the suspended glue-free fiber bundle can withstand higher optical power density and is suitable for Applications such as high-power lasers and fiber lasers that require the transmission of high-power optical signals. Thermal stability: The suspended structure makes the fiber bundle better withstand thermal expansion in high temperature environments, reducing the thermal stress between the fiber core and the outer cladding. This makes the suspended adhesive-free optical fiber bundles have better thermal stability and resistance to burnout in high power applications. Low loss: Due to the suspended structure, the optical loss of the suspended glue-free fiber bundle during transmission is relatively low, which can provide higher optical signal transmission efficiency. Suspended adhesive-free high-power optical fiber bundles are widely used in laser cutting, laser welding, optical fiber sensing and other fields. They can meet the needs of high-power laser systems for fiber optic bundles, and provide efficient and stable optical signal transmission capabilities.
