Report Overview

Swimmer Delivery Vehicles (SDVs) are specialized underwater transportation systems designed to transport personnel, equipment, and supplies covertly and efficiently. These vehicles are primarily used by military and special operations forces for covert insertion and extraction missions, as well as for underwater reconnaissance and surveillance. SDVs are typically compact, highly maneuverable, and equipped with advanced navigation and communication systems to ensure stealth and accuracy during operations. They are often equipped with a propulsion system that allows for both surface and subsurface travel, enabling them to navigate through various water conditions and avoid detection. The design of SDVs prioritizes low acoustic signatures and minimal visibility, making them ideal for covert operations in both shallow and deep waters.
